

Premium Sod From Indysod.com, LLC

Better Ingredients

Seed: We only grow from the best-in-class varieties of seed. We believe that there is no substitute for the absolute finest quality seed available.

Seeding: We use only conservative seeding rates to achieve strong plants. Higher seeding rates allow other farms to push sod quicker, but it results in weaker plants.

Soil: We grow our sod on prime soils.

Better Production Practices

Fertilization: We use only high-grade fertilizers to maximize plant health and rooting ability.

Irrigation: We fully irrigate all of our sod to ensure density and green, lush turf.

Weed Free: We grow our sod to be free of serious weeds, weed seeds, diseases, and insects.

Grown to Maturity: We grow all of our sod to a minimum one year maturity cycle. Sod pieces all have good tensile strength, without being cut too thick to effectively install, but also with minimal tearing.

Farm-Fresh Harvesting and Delivery

Cut-To-Order Harvesting: All of our sod is freshly cut based on your order. You can be assured that your sod will be harvested as close as possible to your scheduled pick-up or delivery time.

Better Project

Sod Is Long Lived: Unlike the carpet that will be replaced every fifteen years, the sod you purchase, with proper care and maintenance, could last almost forever. It makes sense to only buy the best available product.

Get What You Pay For: We believe that you get what you pay for when making your sod purchase. The cheapest grass on the market may be a result of substandard seed, little to no fertilizer or pest controls, and substandard weed control. Farms that do not have adequate irrigation systems struggle to produce healthy sod. The difference can be seen in the finished product and the ultimate value your project delivers.
